

FN-T3

The FN-T3 Positioning Tool works in tandem with a second FN-T3 to assist in the installation of the FAIL NOT™ Hardware System

This tool centers the FAIL NOT™ Hardware on the railing from front to back for the center points on a 2x4 and 2x6 Mail Rail.

This assumes that the 2x4 is on the same plane as your 4x4 posts and the 2x6 is centered on the 4x4 posts.

1. Virtually unbreakable Polycarbonate see-through frame for quicker use
2. Cam Lever Clamp to lock the position of the tool in place
3. Solid Alder wood handle
4. Solid Anodized Aluminum for stability, durability and longevity
5. Marks to identify what type of material sub railing you are using
6. Location for using the Drill Boring Kit
7. Edge is used to butt the Fail Not Hardware for proper positioning
